**NESTLING** A young bird with some A bird that is featherless and feathers but still unable to has its eyes closed. These altricial leave the nest. It birds are completely cannot feed itself and relies entirely

A bird A bird that is the size fully of an feathered adult but with dull, often and actively camouflaging hopping or flapping as it speckled plumage. It will develop full adult learns to fly. It is partly independent but may still need colouring and reach sexual parental help maturity over time

INTRODUCED BIRDS

# NATIVE BIRDS

Birds like tūī, kererū, silvereyes, or Birds of prey such as ruru and fantails, which are widespread NZ falcon. These birds have

and often seen in powerful talons that gardens. They are lock automatically, integral to the requiring ecosystem specialist and are handling to usually protected

Rare species like kōkako or little blue Penguins that require special care. Do not intervene directly—call the DOC

hotline for guidance

**ENDANGERED** 

ensure safety **Species** like grey back gulls, red-billed

**RAPTORS** 

gulls are common in coastal or urban areas. Black-billed gulls are critically endangered and require special attention

# AVIAN POX

**WARNING!** 

guidance.

DRINKING

Birds have a glottis, an airway Red lesions or boils on the legs opening at the base of the and face are highly contagious. Avoid handling infected birds to tongue. Pouring water directly into their mouths can cause aspiration, which can result in fatal pneumonia.

BABY BIRDS

prevent spreading to others.

Contact a vet for further

HOURLY FEEDS

Only feed if begging and unable to reach a rehabilitator for several hours. Use mashed egg or kitten food as a last resort. specialized avian diets are required for long-term care.

**CAUTION!** Baby birds need hourly feeds

from sunrise to sunset. They require specialized care and should never be kept at home professional rehabilitators provide the best chance of survival. HOT WATER BOTTLES

CAT BITES

Birds bitten by cats may seem fine initially but deteriorate rapidly due to bacteria. Suspected cat contact requires

immediate antibiotics to

prevent fatal infection.

These provide warmth but become heat sinks as they cool, leading to hypothermia. Safer heat sources include a heated room or indirect warmth from a controlled heat pad.

PROTECT YOURSELF

WASH YOUR HANDS

Raptors and seabirds can cause serious injury. Use protective gloves and eye protection when handling to prevent bites or scratches that may require indirect contact. medical attention.

**GOOD TO KNOW** Always wash your hands thoroughly after handling birds. Birds can carry zoonotic diseases that may spread to humans through direct or
